
In omni corporis parte inuenitur pinguedo, quae illi necessaria est, conseruandae corporis humiditatis in qua ubi sita est.

Ligamentum, aliud nil est, quam productio membranae alicuius, quae it ab ossis [illegible] incurvandum in alium locum, quasi aluta.

Rarum. { Qui laborarunt Venerea lue, et illiti fuerunt; his dum secatur corpus, in anatome facienda, magna fit haemorragia plerumque uel { inuito sectore; similiter illis uiuentibus aneurisma accidit. Utrumque accidit, quia hi habent uenarum membranas admodum tenues et subtiles, cruentas longe, ac forti lite. hoc de magistro Carolo habui, qui id apprime in quam plurimis obseruauit, et uenas eius compositas [illegible]

Paradox. Clauiculae raro luxantur, rumpuntur saepius. est os repositu omnium corporis ossium facillimum. qui uult biduum continere se in quiete et minime se commouere, statim ut restituatur. curatur facillime.

Paradox. Qui dicunt hernias fieri, per dilatationem peritonei, falluntur. est enim proprie ruptura eius membranae, ut in illo iuuene blesensi suspenso ante fores Luparae. 1582 et secto in aedibus Dioney obseruatum est ab illo met, nil enim inuenit quod producerent, ut plerique arbitrantur, sed rumpitur pars aut portio illa membrana in creandis hernijs, ut in hoc iuuene herniosi petrenti uidimus [illegible]

[illegible]

Reperiuntur multa foramina, nunc paene infinita in ossibus cranij; seruiunt et sunt facta a Natura, ut illac transeant uenae et arteriae [illegible] et cerebro alendis, os enim perforatum ideo est a Natura. id quod admittunt Sylvius. foramen insigne apparet, in mandibula inferiori, quae ramus unus satis insignis de iugulari externa illuc permeat.

Tormenta, quibus sontes a praetore cruciantur, dissipant plerumque, si ualida ac diuturna sint, musculos. quia hi habent fibras molles ac maxime sensiles, quae dilacerantur ac in frusta discerpuntur (Sic in Le folleure d'ung nerf, tendon, o muscle) tales fibrae dilaceratae, sunt exquisitissimi sensus, ideo dolor fit. Quid uero partium extremarum, ut manuum ac pedum, quae sunt in fine musculorum, quo omnes neruí coeunt, ac coincidunt, sunt multo sensibiliores alijs. In illo suspenso Blesensi, qui tormentis fuerat cruciatus, sutorius musculus repertus est disruptus, ac spongioides, cum insigni haemorragia dexterius. At non sic se prodebat oculis, quia cutis fuerat intacta et integra. [illegible] enim cutis, non ruptus est, his haemorragia loci subiecti non apparet. ut le folgure argentum fundante, intacto reticulo. At secta cute, liuentem pubem, et haemorragiam insignem uidimus.

Sceletton infantium, non est omnino ac penitus simile, sceleto uirorum et adultorum; quia in illo sunt quaedam ossa, ita tenella, ut cartilagines haud ossea natura esse uideantur, ita multos deciperet. deinde commissurae cranij sunt in puellis et minime adultis, latiores, ut hiulcae ac ruptae esse uideantur. At in adultis, omnia sunt coagmentata ac consolidata et sicca. In infantibus, apparet latae istae commissurae, quia cranium est omnino [illegible], animae ac humiditate quae sustentant.

Problema. Cranium, est multis commissuris plenum, et segmentis multis. Itemque ut fiat expulsio commoda uaporum multorum per eas, de subdito capite eleuatorum, per uarias uias. Item ut una parte laesa, aut rupta, aut collisa, altera minime dissipatur. Sed aer interceptus [illegible] ut Fallopius docuit, et in cranio meo puellae, quam domi habeo, obseruaui. Ideo, plerisque uiris, ac foeminis magni dolores capitis adsunt. et tandem incurabiles, aut cranij durioris et crassioris uitio, aut pruritu et obstructione commissurarum. Ideo nostra remedia irrita, nequeuntes nos id [illegible] cerebri. nisi ab obitu.

Omnium corporis musculorum, longissimus est, quod ad tendinem attinet, qui musculi finis est, (nam caput dicitur ubi oritur et inseritur, cauda ubi definit musculus), plantaris dictus in tibia, et palmaris in manu. utriusque musculi cauda seu tendo, dura est, subtilis, lucida, uidetur esse seta alba dicta (Roso). Decurrit uero haec cauda, secundum uentriculum cruris. Longissimus uero habet qui tota; Sutorius dictus. Latissimus carnosus, at maxime neruosus. ideo minime sub eo contenta computrescunt. dolores parit acerbissimos. cum exitum non habeant, et [illegible] per [illegible]. difficilem. Hinc commendator Birgius. 1582. cum laboraret eo loco, acerbissimo dolore, fere interijt; ad tres menses inutilis decubuit postridue. hinc dolores [illegible], cum [illegible] equis uehitur.

Rarum. { Glandulae quae post aures sunt, in quibus continetur materia parotidum, et strumarum itidem materia, sunt admodum crassae, magnae, et nescio quo aliarum, multis uenis repletae, quae ruptae, magnae, tumidaeque sunt. Inuenti sunt non pauci, qui habuerunt bubones uenereos ea in parte, haud secus, ac in inguinibus accidere uidemus. ut mihi affirmauit Dioneau, se uidisse in qualam sacrificulo. Haec mira; Item de Lues Venerea facit abscessus in ossibus. tanto plus in partibus mollibus ergo abscessus illius loci, ja ene Gallicas, nec alio malo, quae ille [illegible]. Mira est nostra industria, uenas, neruos, arteriasque condit Natura in ima corporis parte, ea sola ratione, ut ab omni periculo, quod illis extrinsecus accidere posset, sint tutae, tamen non desinunt mittere ac porrigere ramos suos illuc, ad superficiem et ad extremitates corporis partes alendas.

Problema. [illegible] Cur dolor auris, sit omnium acerbissimus et plerumque lethalis? Quia multae uenae et arteriae concluduntur, intra exiguissimum illud spatium intra os, ideo cum nimium correptum, si calor semel praeeunderit, effeminare facit, ac bullientem in abscessum uertit facile contingit, patuit in rege Gimo et Henrico, qui solio imperat 1582. Luparae, fere sublatus e uita.

Peritoneum. Peritoneum, est membrana dura et ualde sensilis, orta a uertebris spinae. seu a membrana uestiente medullam spinalem; est uero circa ac ancas ac uacuum, uentris inferioris undique distenta. hinc oritur dolor saeuus, qui circa os pubis, aut os ilium, in profundo percipitur. comprehendit uero, sua amplitudine et capacitate atque [illegible] omnia uiscera, lumbos, [illegible]. soli renes (quod contra opinionem) sunt extra peritoneum. contiguitate, quod dolor uel leuis alicuius partis internae, toti communicatur corpori.

Problema. Cur os anterius capitis. maxime quod inter supercilia est, duplex sit, ut manifesto appareat cauitas quaedam? Quia os anterius debile est, et ne frangatur pars extrema, et [illegible] efficiatur, fecit Natura, duas ueluti tabulas superpositas sibi cum leui interstitio ——

Proble. 1. Cur barbitonsores et chyrurgi, solent gravissimè eos, quorum venas secant, ut gravissimos dolores cieant, veluti accidit Carolo regi 9° cum urbe Aurelianis adibus, qui convulsione fermè interijt, puncto nervo, ab inperito chyrurgo cum cultello? — Quia sæpe accidit, ut tendinem musculi (aut velut vdus.) Bicipis dicti compungant, qui pervenit fermè, ad medium curvaturæ brachij. Aut compungunt ac feriunt cranium nervum, qui excurrit secundum brachium ad manum usque, motum ac sensum præbens manibus et digitis. Ille enim, et se manifestis tendonibus, ac nervis omnino, unde illis subministratur, ideo convulsio succedit. Convulsio vero, facilè curatur, aperto ac patentius facto loco convulso, ut nil putridi in abscessu convorsa effluat, suspendatur optime Terebentina, quæ sedat dolorem, digerit materiam putrem, nervum corroborat, et tollit de [illegible] fundo quæ omnia, in isto affectu, sunt inprimis requisita. At nervus ille cranius, qui à parte interna seu domestica sectum brachij excurrit, in musculos eiusdem dispenditur, et membranas, et ex bisce tendones gignuntur, qui sunt valde sensiles. eodem plane modo, quo venæ et arteriæ, in carnem dispergantur, ac quasi sese perdiderint, evanescunt. quod in summis digitis ubi desinunt, facile cognoscitur.

2m. Cur sæpe fiat, ut in sectione venæ brachij, fiant trumbi? Quia chyrurgus punxit venam, non sicut ut secanda esset, id affluat sanguinis locum, non effluxit, sed totus affatim subsidit, ac non respondit, id locus tumidus et niger, relicto inter corium ac carnem, sanguine extra vaseto. Secanda autem vena non punctim, nec orbiculariter, sed oblique. id est diametraliter, ut non sequamur in sectione ductum villorum. Quod etiam contingit, ut raro tamen, non venæ corpus secetur, id trombus. et distillat sanguinis, non effluxio. [illegible] simul rosacei, olei aut unguenti cinamomi.

3m. Cur quandoque sanguis non effluat, vel secta vena? Quia aut timet æger, à motu vero, sanguinis repentinus affluxus ad cor, id non effluxit per vulnus aut pinguedo aliqua obstruxit vulnus, quæ in panniculo carnoso plurima est; aut nimis arcta, aut nimius laxitur brachium est vinctum ab utroque enim immoderato, sanguis retinetur, id chyrurgi, ut aerem dent venæ. more secta ea, laxent vinculum. mollis enim nimium ligatura non [illegible] sanguinem ad locum vinctum, Arctissime, reprimit spiritus ac sanguinem. Quandoque secatur caro, et vena retrahitur effugit cultellum unde, nullo modo emanat sanguis. Quandoque à carne, separata est fermè vena, ut in valde senibus; hanc chyrurgus, nisi prudenter et continuò [illegible] amoto digito de loco secto sequatur cultello, elabitur, et sanguis non effluit. quod observavi hoc anno 1583 Novembre mense in domino Cancellario Birago, cui octies missus est sanguis in sua febre, et Petrus Boytreau chyrurgus, qui ei ter secuit venam, hoc mihi dixit, et ut ea sæpe effectum exercuit; et certè ut cerebrum à cranio separatur in valde senibus, sic et venæ solent concidere ac flaccescere, ut separatæ videantur cum tamen non sint.

4m. Cur non in omnibus hominibus, eodem loco semper sint venæ? Naturæ id vitio accidit, quæ non servavit in conformatione situm ordinarium. quid faciendum chyrurgo, si venam nequeat secare? fricetur diu brachium linteo calido, aut aqua tepida aut calente foveatur, spongia infusa in ea, aut experiatur num in altero brachio reperiri possit: sic enim fieri vidi plurimum. Venam vero deprehendere chyrurgus tandem magis ex usu, aut in aliam differatur sectio, ut à prandio, quo tempore venæ tument amplius, aut ille brachium exerceat, ut pilo [illegible], ut commode intumescat.

Vidi quibusdam ætatis esse venam basilicam, non in curvatura brachij, ut assolet, At supra carpum ad octo digitos, quod alibi non apparebat, nec ulla alia erat conspicua. Item sitam basilicam fuisse sub cubito, ut cum secanda esset, oportuisset chyrurgum deferre manum cum parte simul, ut esset in conspicuo ac secaretur. Item in pinguibus; oportuit primo loco secare carnem, deinde 2° secare venam. ita ut duo vulnera fierent separatim et pluribus bis admoveretur, bis exueretur: hoc magno ægri dolore et incommodo fit. ac alio fieri nequit, dum urget morbus in hac corporis [illegible].

Pendeoso: Falsum est, quod medicorum plerique arbitrantur. Partem corporis dextram, esse omninò omnibus in rebus similem et æqualem sinistræ, Multa enim sunt in una, quæ in altera non inveniuntur; præcipue Azygos et intercostalis in una parte inveniuntur, quæ non reperies in alia, ut docebitur suo loco à me, infra. Quamobrem falsum est, venas dextri lateris, ac dextræ partis, esse situ, numero, actione pares aut similes parium venis sinistræ partis, ut patet ex Anatome.

Problema. Cur ictus ac vulnera, quæ faciei infliguntur, tantam et tam diuturnam hæmorragiam faciant, ut ultra sex dies etiam sanguis manet! Quia sanguis à superioris potius et inferioris una venit; A tribus nempe, à iugularibus internis et externis. Ideo durat facile hæmorragia, usque sedabilis, sex continuos dies. Deinde nequit vinciri ac fasciari gena, ut cæteræ corporis partes, quod nares obstant, id à Carolo Bacillerio didici. hæc cæteris corporis partibus, minime accidunt.

[illegible] Quamvis non sit in more positum, utile tamen esset in Apoplexia secare Iugulares, nec in apoplexia modo, verum et in Angina, ac alijs morbis capitis, et totius capitis; intra enim et extra cranium, varijs gyris ac anfractibus iugulares sese miscent, ut cum ab his aletur cerebrum, per easdem quoque morbi ipsius curantur. Et inventi sunt, qui maximo salutis suæ commodo, iugulares aperuerunt gladiolo. Nam apoplexia fit, interceptis spiritibus in arterijs, Carotides dictis, quæ una cum internis Iugularibus, ad cerebrum ascendunt, ipsique conimaxime, Rete mirabile componunt. Similiter quoque epilepsiæ. ac alijs morbis cerebri. Pungendi modus. Ligato collo, nota locum cum atramento, per quem vena transit, dissolue. etiam non vincto collo, feri locum notatum; Nullus est metus de nervo, quod nullus subest, metus est de hæmorragia, quæ tamen sedari facile potest.

Problema. Cur phlebotomij libenter applicantur prope aures, ut patet in surditate, difficili auditu, et diutino dolore? quia prope aures, imo proxime transit, crassus quidam ramus, ac ferme maximus iugularis internæ, ut patet in sequenti schemate. y. et. o. in capite. aqua multa educatur.

Problema. Cur vulnera sub axillis, præsertim quæ penetrant et sunt profunda, sunt periculosissima et unius horæ spatio hominem interdum perimant, ut magister Carolus Bacillerius chyrurgus, in quodam nobili vulnerato observavit? Quia sub alis, multæ sunt glandulæ venæ et arteriolis, plurimis et non infinitis referta, à quibus repentina et maxima fit sanguinis effusio. Deinde crassissima vasa, axillaris nempe, quæ à subclavia venit; arteria maxime ab Aorta exorta, quæ spiritus brachijs ac manibus defert, crassissimus quoque nervus illac transit, motum ac sensum præbens connotatis partibus, ut altera ex his, aut omnibus simul læsis, mortem sequi necesse oportet; aut ab hemorragia insigni, aut à dolore summo.

(Marginal notes, left: aut velut vdus.; genis [illegible]; Problema; et arteriolis; hinc illæ [illegible] illius loci, in quo [illegible]; observa; quam vel alij [illegible]; [illegible])

observa. Quælibet vena, quælibet arteria, quælibet musculus, habet suam propriam et peculiarem tunicam, qua induitur. hoc vero non beneficio, et providentia factum est; nempe ut eas muniat penetrantibus per eaque, ne motu ac incessu validiore disrumperentur, ac ne ab obvio quoque lædarentur: deinde ut medio harum membranarum, cæteris partibus coniungantur, ac cæteris vasis, corporisque structura sit validior.

BVBO: INGVINVM. Naturale est, mittere excrementa à nobilioribus partibus et principibus, ad sua emissaria propria; et hoc opus semper præstat quando [illegible] autem, si minime impediatur. quod si nequeat per consueta loca, alios sibi occultos tramites ac veluti cuniculos parat. per quos id [illegible]. Hæ glandulæ excrementa iecoris ab se transmissa recipiunt, et ibi Cruralis venæ, rami quoque [illegible] quæ cruralis, à Cava descendente nascitur. Transeunt vero bani cruralium, rami aliquot insignes, ac penetrant totum pudendum seu penem, et arteriarum quoque rami multi, per glandulas inguinum ac pudendi sedem transeunt. Ergo cruralis venæ, sunt delatoriæ huius excrementi. Ita in bonam curationem, à talo sanguinem mittimus derivando, et vacuando. Problem. Cur, et quare contusio percepta in masculo, sic et pedis inversio (entorse vulgò) tam sæva ac longum dolorem pariat? Quia fibræ carnosæ musculi disruptæ ac dilaceratæ saltem distenduntur, ut tonum pristinum diutissime amittant, quo novi quoque rumpuntur, et inflammantur.

Paradoxon — Salvatella, quamquam omnes medici arbitrentur lienem conducere, et eum à morbis liberare, si secetur, tamen nullo modo est, cum liene communicat, ut patet in dissectione corporis; atque haec sunt veterum commenta inania. Item nulla certa est ratio, ob quam in lienis morbis a sinistro potius quam à dextro sanguis mitti debeat, nulla enim vasis communicatio, nulla derivatio, nullus ductus. Sed sunt veterum anatomes ignorantia ergo, si potest evacuare per eam partem, est quod vicinior et propinquior est lieni. Hoc est dicere solebat Grandis.

Ut tamen dici, eam invenire lienem mortis quadantenus et ab illo oriri, quod salvatella oritur à cubitali, hoc est axillari externa, axillaris a trunco cavae. Ita quodammodo à liene oriri videtur. Res est apparens magis, quam vera.

Cauteria quae brachio admoventur, ad caterrhi derivationem, fiunt tuto ad minori cephalicae venae, et multum prodenent; sicuti in domina Antonia velle considerant Rossettus, qui quam proxime eam, id parit, et si super ea potuisset poni, multo conducibilius. Ut situs et locus proprius sese mihi non invenitur. Idem sensit Dioneau, quam contra opinionem, negantem super ea poni debere. At non parit ob metum hemorragiae, si forte contingat secanda in morbis venae cephalica, et non sit conspicua, ad venam confugito, eamque ad pollicem secato, ab ea enim descendit, ut patet schemate opposito, aut supra carpum, ad quatuor digitos, ita tripliciter feriri potest. Potest quoque secari inter cubitum et axillam, et non audet chirurgi, cum id tamen possent tuto et cum ratione. Est enim ubique eadem vena. Sic consuluit Dioneau.

Si vena, quam secare cupimus, non est in conspicuo, sumere licet propinquiorem, et magis conspicuam, quae ab eadem trunco oriuntur, et dolores, proximos ventrem solvere expedit; ita vicem basilicae, supplet cephalica, et vicissim, quae omnes invicem coeunt, etc. ad eadem feriuntur trunci.

Unde oritur abscessus, in vulnere facto à chyrurgo dum secat venam, qualem vidi hoc anno in Francisca Biragia, Mediolanensis Helle, 1563. Augusto, secta basilica? Quod vena non fuit aperta integre ac bene ut oportuit, sed tantum mediocriter, unde sanguis libere nequivit effluere, sed retentus livescere ac putrescere coactus est. Diu laboravit, et similiter debuit ex hoc cephalica vena, quod nervum nullum habet suppositum, et nullum tendonem, sine ullo incommodo aperiri potest. At quae incertae ac inflexae brachii opus est, et pellis extenditur, et quasi trahit, est molestior ac difficilior sectu.

Chyrurgi, imprudenter aliquando secant venam, ut eam transfodiant et transverberent; Nullum tamen inde accedit incommodum, quia musculus qui sub vena est, eam unit et consolidat. Praestat in huiuscemodi affectibus, vulnus esse maius et patentius, quam angustius, ut materia citius exeat, et exhalet virus; nam abscessus ibi gignitur, quod non detur exitus materiae suppuratae; unde morbus et dolor.

Paradoxon — Sunt multae Venae, quae iuxtas sibi non habent arterias, Sunt quae habeant, et una per corpus distribuuntur, ac deleat, una incedit, [illegible] est vena Iugularis interna ascendens, quae totidem arteriam comitem et coniunctam habet, et una per collos perreptans in [illegible] dit, habet mirabile intercursus. Ideo falsa eorum opinio, quae communis est, eo vena semper coniunctam esse arteriam. Non omnes item habent nervos suppositos, at quaedam tantum.

Cur cauterium quod admotum est brachio domine de Blennel viro D. Antonij, eam ledit tam graviter? Quod membranam musculi deltoydis quae eius finem nempe tendinem ambit, aut bicipitis tendinem, ledit. Aut pila, quae sublimatum recipit, ulcerat ac ciet dolorem. Quibus affectibus medendum ita. Mutetur cauterij locus, et magis infra ponatur, idest quatuor digitis supra carnaturam; Pila vero in aqua frigida. Eodem vitio, cauterium Madamiselle de la porta, hospitii du grand prevost, est offendit.

Problema

Fluxiones quae in corpus fiunt, per Venas et arterias fiunt, non ut putavit Fernelius per membranas tantum; fiunt et per nervos, quas fortiores, tenui sunt humores; quae similis antitime omnibus, quae ad inferiores partes deferri ac transire reguntur. Fluxiones vero, quales sunt podagra, chyragra, artritis, erysipellas, phlegmone, ac huiusmodi. Non est expressio, humoris turgentis, ac quasi protrusio materiae calidioris offendentis de vasis maioribus ad minora, de his ad minima, tandem ad capillares; atque hoc fluxionis genus spectat ad cor, iecur, et inguinas partes

FLUXIO — intemperaturas, dum sese exonerant, ac nocuum à se arcent, noceum vero quali aut quanto. At ea fluxio, quae à cerebro originem habet, magis vere, per nervos et membranas fertur, quod non est aliud ea fluxio, quam sudor cerebri, ob materiam sensum tenuem, liquabilem. [illegible] [illegible] vero seu catarrhus, qui à cerebro it ac labitur in pulmones, per pelvim descendit sensibiliter ac perpendiculariter in eos, nec alia est via aut ductus, per quam hic humor ellabatur ad inde. Quem legere ego observavi in puerulis dormientibus, qui salivam deglutiunt, et [illegible] saepe accidit in suo caterrhoad thorace.

Unde oriuntur varices in cruribus? Accidit plerumque ut ulcera oriantur in tibiis, ob venas quae ulcus illud fovent, et sua humiditate continua conservant, eam ad illud transmittentes, ut tandem tumeant; et vi ac copia humoris abundantis, et eo appellentis fiant varicosae et distentae, ut patet in Servigio Florentino, cruralis enim externa, proxime illius ulcus, illud fovet ac semet in suo esse, ac humiditatem illi

VARIX — suggerebat. Sic in Stephano Poggio amico meo. Nam non sunt varicosae venae de se, at est morbus, nempe ingens ac perennis fluxio quae eas reddit varicosas, extendendo ac dilatando tunicas venarum. Id Varix, morbus est, non quippiam naturale. Paradoxum.

Vena cruralis externa, quamvis sit una tantum numero, tria tamen habet nomina pro locis, per quos habet transire. Cruralis dicitur ab origine; cum prope genu fuerit, usque ad medium tibiae ubi crassior est, dicitur poplitis vena; inde ad plantam usque pedis, dicitur saphena aut malleolus, est solitaria nec habet comitem aut sociam arteriam, eo prorsus modo, quo axillaris interna brachij. Hanc tundere vere possumus ac debemus in morbis corpus occupantibus à Zona infra, tam in maribus quam foeminis quibuslibet. Est enim vas magnum et peramplum. Hic olim Saphena dici putavit, ut axillaris externa; atque hoc naturae providentia, tum ne facile contingeret hemorragia, tum ne ab externis facile laederetur, tamen etiam ne dispergerentur, aut deturmerentur, at introrsum utraque recondunt ad vitandum periculum. At cruralis interna, et cruralis externa, quibusdam tantis iunguntur unam, quibusdam non, Ideo non est verum coire sibi invicem illas venas, et anastomosi quadam se se mutuo complecti. At Cauteria quae cruribus adhibentur, in externa parte, optime vere ponuntur, sub genu ad 4or digitos. Ibi etenim sunt plurimi rami, crassi, copiosique venarum, ut facilis ac copiosa fiat evacuatio, admisso cauterio. Quae regula in omni cauterio adhibendo, est advertenda, si volumus ut illud prosit, ubi

de CAUTERIO — commodissime ac liberrime vacuatur pars. Propterea in tibia del Capitan Maltese, quae quotidie intumescebat, optimum fuisset aut in eadem parte, aut in opposita cauterium admovere, et postremo id fecit, sic et Stephanus Poggius, in suo crure dextro, et valde profuit. Inveniuntur nihilominus aliquot chyrurgi, qui putent ad interna cruris ponendum cauterium, qua perreptat Saphena, quod illhac multi rami maiores transfeunt, et copiosior sit vacuatio. At secundum posticam partem, à poplite, usque ad calcem excurrit crassissima vena, dicta cruralis externa, [illegible] da, crassa, quae à Natura altera excogitur, hae fuit vasphnoides secta in quodam Veneto, qui curatus est a Falloppio. Sed tamen non ita, quin semper imbecillas haberent tibias, graciles, et frigidas, ita ut Arcet gravissime. 1562.

Arteriae et venae simulatque ad summos digitos pervenerint, evanescunt ferme, et suam naturam amittunt, degenerantque ac transeunt in membranas ac ligamenta, fiuntque unum una icendum. Id dolor quem summis digitis percipimus, parit syncopen, Nam venae et arteriae, quae suae corporae sibilis, coalescuntur eo modo, adhuc amplius sentiunt.

Unde oritur tam saevus dolor, qualem percipimus in musculorum [illegible]? à natura partis oritur. Habet enim quisque musculus suam propriam tunicam et membranam admodum sensilem, ac dum est in compositione ac structura totius corporis, ambulatur etiam à communi quadam membrana, quam eius, [illegible] ambit ac vestit, id dolor geminatur. Ludit vero Natura in conformatione partium corporis; aliquando enim producit ramos venae aut arteriae qui sese in carnem inserunt, praeter morem ac consuetudinem, quae in aliis corporibus non inveniuntur; aliquando cincinnos venae facit, ut pro libito, hac illac disseminans ramos, aliud alij, ut nova efficit.

ψ. ista est cervicalis vena, orta de cava ascendente, iugularis internae socia. ab hac quae cervicalis, oritur hoc loco, vena puppis dicta quae secatur in dolore capitis antiquo ut docuit Hyppocr. dolenti antiquo capitis ... et convulsim, ad signum g. cognoscitur magis tactu quam visu, in quibusdam n. non percipitur aut reconditur. abradendum capillitium. et ubi ista vena, puppis dicta, quam proxime suturam Lambdoidem, quam hoc pacto secari oportet. premitur egregie locus, quem perreptare creditur, et ubi aliquid nigri conspicitur, ibi scinditur, et sic excaudatur gladiolus, sine ullo periculo, quod nullus subest nervus, ad modum sartoris, pannum forcipe scindentes; sic venarum dena (si cole longo longo con la lancetta) Utraque sectio est bona. Utrumque est opus illis administranda, qui cupiunt invitari chyrurgiae, ut eorum industria probetur.

Paradoxe de pleuriade. — *ces* — *quae semper*

Sunt qui credunt pleuritin non esse morbum pleurae, sed illius inflammationem, at pulmonis proprie ac per se morbum, quod [illegible] uerum sit, [illegible] morbum committere potenti per uenas [illegible] [illegible] ac extrema [illegible] [illegible]. Pleuritidis [illegible] me, ad cor deferetur per uenam arteriosam, transitque per [illegible] cordis et ipsius basim. [illegible] transfert aut in [illegible] [illegible] cordis substantiam. Inde per arteriam [illegible] ad emulgentes arterias, [illegible] [illegible] uenas emulgentem. Ex situ ac positione coli et splenis, patet quare saepe decipiantur plurimi medicorum, cum dolore [illegible] affici intelligunt ea parte, morbum splenem incusant, quod in sinistro latere sit collocatus, quasi omnis dolor laevus
Paradoxon — [illegible] sit semper splenicus. ut in [illegible] de Richelieu. Nam dolor illius, est coli dolor, et illius portionis [illegible], quae ei adhaeret nempe in [illegible]: ubi sunt crassa intestina, non in venis lacteis, ubi sunt tenuia intestina. Splen vero, non est in anteriore parte, sed posteriore sub costis [illegible] grandis et [illegible], [illegible] sentur, si [illegible] splenicus [illegible] affirmabant [illegible]. Nam aut est colicus, aut mixtus ex colico et splenico. A splene enim [illegible] [illegible] seu colon sunt vasa et rami venentia [illegible] splenico ramo per quae [illegible], ab una parte ad alteram transmittuntur.
Paradoxon — Quod dicitur nomine Coecum intestinum esse illud, quod decidit in scrotum et facit hernias, falsum est ut patet ex situ, et [illegible] suo, item ex magnitudine illius exiguo, At quod decidit facile [illegible] est [illegible]. Coecum non [illegible] potius renibus. [illegible] quod possit incidere in scrotum. veterum medicorum, [illegible] in veritate indaganda per anatomen vitium:

Ut patet ex sequente [illegible] quod [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] in sinistro latere [illegible] sub costis [illegible] aliter sentiens) [illegible] seu exitus in dextro latere [illegible] [illegible] [illegible] ventriculi [illegible] [illegible] a [illegible] [illegible] colo, [illegible] a [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] tribuatur ac [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] non ventriculi [illegible] videtur [illegible] [illegible] illud esse [illegible]

Nam [illegible]
Signo — [illegible] vocamus [illegible] [illegible] [illegible] et [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] aut Meandros, [illegible] [illegible] [illegible] [illegible] aut [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] ac [illegible] [illegible] in fundi pars, [illegible] minus sensilis. non ita coli

Ut patet ex situ intestinorum. Tenuia sunt versus os pubis, et infra umbilicum, Crassa vero sunt superius, quod ad huc melius in sequentibus schematis considerabis. Ergo intestina tenuia, situ sunt infra umbilicum et os pubis contingunt, crassa vero et sursum, sunt supra, quae a pyloro oriuntur. Crassa e contra. Hinc errant medicorum plerique in cordiale et curatione eorum, in doloribus intestinorum ac dysenteriae sede

Considerandum.

Observatum quoque ex eorundem situ, chylum seu assumptum cibum, versus sinistrum latus ascendere, deinde per ileum, unde ex tenuibus descendere, ac rursus ascendere. Fit enim absolute contra chylum non modo in ventriculo, sed etiam in tenuibus intestinis. Ubi vero motus chyli. facile innotescit per situm intestinorum cum tenuia sint situ inferiora, crassa vero e contra.

Considerandum.

Colon tam subit alte costas, ut etiam stomachi seu ventriculi sede collocetur. Hinc saepe error medicorum, confirmantium dolorem sub costis perceptum esse splenicum, cum colicus sit ut in sinistra regione manifesto infra notato. Et eadem de causa

Problema

Cur colicus cruciatus, sit morbus ita frequens, quia colon est intestinorum maximum. Magnas habet venas et arterias secundum ipsius longitudinem, arteria vero et vena dividuntur, quasi funes aliquos illius tendo, a quo fune multi rami hinc illinc diffunduntur, habet etiam aliquos nervos, sed parvulos. Ergo ob multiplicem venarum et arteriarum plexum quo etc. illigata est, etiam vehementes dolores, et crebri oriuntur. Soles rami a mesenterii venis et coeliaca arteria oriuntur, quae ab aorta nascitur. Facit vero mesentericus ramus in majorem, veluti circulum ab eo enim ut a centro, multi rami quasi rotae alicuius radij hinc illinc ad intestina amplectenda et continenda veniunt, per quae aluntur. et dicuntur mesaraicae venae, ut in sequentibus schematis apparet. Precipue vero mesaraeum fictum est. ubi etiam venulae in intestinis reperiuntur, innumerabiliaque per corpus ipsum disperse. Dysenteriae multi curantur, vel curantur aut curandum duplici munere funguntur ubi venae. Chylum scilicet ferunt ac deferunt, eiusdem portae ubi abstrahi videntur intestina.

Colon, quod tam vehementer tumescit, ut contineat cylindrum qui contractio omnis extimetur. Ideo in parte dicta Serviel manu regia, quod lyra videbatur qui hydropicus obijt. Cum intestina erant tota fortasse hinc et inde, mutabat eius tumorem in ubi fuisset. reputatum est respirationem impediit comprimens diaphragma

Habet vero multos sinus ac plexus seu volumina in quibus excrementa continentur quemadmodum est in coeco dictum et adnotatum quod, et multa plurimae omnia sint referta, non in longo medio, ac tamen experire quod ei est alendo non enim solum stercus continetur in ipso. at cum stercore, omnia mihi excrementitia saturata. et non mirum mulierem captivam ii. dies vixisse sine cibo

Habet idem colon, quod notandum est, multum de pinguedine extrinsecus dispersa per membranam ambientem, quam pinguedo nil aliud est, quam venarum fines ipsius continentium et alentium de mesaraico ramo ortae. et coeliaco quoque. Armenia autem studiosi fere finem fallam hac consuetudine. ne deinde ferantur hoc e paucis anatomicis observatis. excrementum superfluum eam pinguedinem esse putantes, ad eam esse ut ad necessitatem et hoc quoniam usum habeant in indicatione. Ego vero id vidi ac dissecui ponitus. et verum esse reperi. Nihil enim nil facit frustra

In Marco Antonio Genuo, hoc libro aliquoties memorato, Inueni iecur exsuccum, aridum, et graui coloris, quasi si ebullisset diutissime in lebete, ita obdurescebat. eodem pacto pulmones erant affecti. Sic in de Beaumont sorore de la Simone. Sic in cancellario cardinale Birago, cui iecur inuentum est omnino exangue, et quicquid prodijt, ut ab eo exstinctum, fuit sanguis grumosus, crassus, niger et [illegible] coloris natiui, per alienum colorem, quod tam frequenter, et tam [illegible]. uel recte ualens fuit plethoricus ut minus [illegible] a trimestri febre omnia fuisse absumpta ac absorpta. Et obseruaui in ijs febre diuturna extinctis, iecur obduruisse, prauum colorem contraxisse, et exsuccum inuentum esse. obduruisse maxime in extremis lobis.
